EDUCATION

Instituto Tecnológico y de Estudios Superiores de Monterrey (ITESM)   Graduating in December 2019
Bachelor of Science in Computer Technologies   *GPA 95/100*

WORK EXPERIENCE

Google   Kirkland, WA, USA
Engineering Practicum Intern - DoubleClick Search - Optimization Team: Health Detectors   05/17 - 08/17
- Developed and designed two health detectors for issues affecting bid strategies, improving the monitoring of bid strategy health and the bidding efficiency.
- Worked in backend using Java and Protocol Buffers, and in frontend with Angular Dart. Used Bazel as build tool.
- Studied the product's business logic and the advertisement industry. Fixed bugs and contributed with small features outside of the main projects.

ITESM   Monterrey, N.L, Mexico
Information Security Intern   01/16 - 05/17
- Found vulnerabilities in ITESM's institutional websites and exploited them methods such as XSS, SQL injection, among others.
- Automated vulnerability scans by developing Python scripts.

PROJECTS

Spydan   2016
A web spider that crawls shodan.io to get information about devices connected to the Internet and to identify vulnerabilities.

- Developed in Python using Scrapy, a module for web scraping.
- Retrieved used services, open ports and possible vulnerabilities from a specified network's servers and devices, allowing the identification of several vulnerabilities such as open FTP ports and outdated software.

TesserCats   2015
A multiplatform desktop application that extracts personal information from a passport's image based on it's alphanumeric key.
- Developed the backend in Java.
- Used Tesseract, Google's OCR engine to extract the passport's text.

AdminLogin   2016
A script that finds the administrator or login page given a URL or IP.

- Developed in Python.
- Used a dictionary of common paths that lead to the login or administrator page.
- Identified possible sites vulnerable to brute force attacks..

JoJo   2016
Small framework to scan Joomla! websites for vulnerabilities.

- Developed in Python.
- Created 3 modules: CMS detector, vulnerability scanner using joomscan (an existing script for vulnerability scanning), and result filter for better analysis.
- Assessed the status of ITESM's Joomla! sites.

SKILLS

PROGRAMMING LANGUAGES			TECHNOLOGIES & MISC
2 years	Intermediate	C++	Javascript, Shell, Protocol Buffers, Bazel, *nix, HTML, CSS, Git, Nessus, Metasploit, Design Docs.
2 years	Intermediate	Java	
4 months	Beginner	Python	
3 months	Beginner	Dart	

AWARDS

Academic Talent Scholarship from ITESM.
Mention of Excellence in Prepa Tec CEGL (High School)
